A Distributional Analysis of the Ohio Estate Tax, 2000-2004

Introduction

The Ohio estate tax has been in existence since 1968. The tax is now wholly independent of the federal estate tax and is not affected by the current phase-out of the federal tax. The last linkage to the federal estate tax was eliminated when the Ohio “additional” estate tax was eliminated. The additional estate tax had been tied to the federal estate tax credit for state estate taxes paid.

Revenues from the estate tax are divided between the state and the township or municipality in which the decedent lived and/or owned property at the time of death. Under current law, 20 percent of the estate tax revenue is allocated to the state with the remaining 80 percent allocated to the local governments. The current law has been in effect for estates with dates of death on or after January 1, 2002. This was the end of a two-year phase down of the tax. Prior to the phase down, the tax applied to all estates with taxable values over \$25,000. For those estates, the distribution of revenue was 36 percent to the state and 64 percent to local governments. Since the law change, the estate tax now only applies to estates with taxable values above \$338,333. Because of the lag in filings and collections, the first year of the phase down would not have begun affecting local governments until 2002 and the current levels of tax and allocation of revenue would have begun impacting local governments in 2003. This study analyzes the local portion of the estate tax.

Collection of Data

The data set used in this analysis consists of the following items: Ohio estate tax revenue received by local jurisdictions, local population estimates, municipal income tax revenue, and local government general fund revenue from 2000 – 2004. This analysis covers all jurisdictions in Ohio, with additional focus on 43 local government jurisdictions that we have identified to be most reliant on estate tax revenues. The purpose of this analysis is to give insight into the reliance of local governments on estate tax revenue by providing a clearer understanding of the distributional impacts of the Ohio estate tax.

We compiled estate tax data for all local government jurisdictions in Ohio and population data for each local jurisdiction. We calculated estate tax revenue per capita by jurisdiction by dividing the estimated population in the jurisdiction into the amount of estate tax revenue received by the jurisdiction.

We created two subsets based on how many years each jurisdiction received Ohio estate tax revenue within the 2000 – 2004 period, one subset in which jurisdictions received estate tax in each of the five years and a second subset in which jurisdictions received estate tax for less than five of the years contained in this study. We assumed that local jurisdictions that had received estate tax revenue in each of the five years would be more impacted by any changes in estate tax revenues than jurisdictions that had not received revenue every year.

Table 1 summarizes Ohio estate tax revenue received by local jurisdictions. A total of 1,124 jurisdictions received estate tax revenue in each of the five years, while 1,126 jurisdictions received estate tax revenue in fewer than the five years, including 56 jurisdictions that did not receive any estate tax revenue at all during the time period studied.

**Table 1 – Estate Tax Summary by Year
Total Revenues in Millions of Dollars**

	2000	2001	2002	2003	2004	# of Jurisdictions
Amount Received “Five Year Jurisdictions”	\$249.6	\$252.8	\$209.9	\$210.6	\$189.1	1,124
Amount Received “Less Than Five Year Jurisdictions”	\$15.1	\$15.9	\$34.7	\$12.1	\$ 12.1	1,126
Total Estate Tax	\$264.7	\$268.6	\$244.6	\$222.7	\$201.1	2,250
Total Population¹	11,363,809	11,384,992	11,404,651	11,431,748	11,450,143	
Per Capita Amount	\$23.29	\$23.60	\$21.45	\$19.48	\$17.57	

¹ Source: Population Division, U.S. Census Bureau

Ohio estate tax revenue received by local jurisdictions varied during the sample period, which may reflect the volatile nature of the estate tax. Estate tax revenue can be reactive to stock market and other economic conditions. In addition, the large drop from 2001 to 2002 is partly a result of the phase down of the estate tax that began in 2001. It is also important to note that large swings in estate tax revenue can also occur due to a small number of high-value estates finalized in that time period and location. For the “Less Than Five Year” subset of jurisdictions, initially the estate tax collected seems to rise gradually, rise drastically in 2002 and then drop drastically to a level even lower than the initial year. The large rise in 2002 was due to a single estate. The total estate tax for all jurisdictions shows an increase from 2000 to 2001, then a decrease during the remainder of the period. Estate tax revenue per capita shows a similar trend.

Estate Tax Revenue on a Per Capita Basis

We next examined estate tax revenue received within local jurisdictions on a per capita basis. Table 2.1 summarizes estate tax revenue received by jurisdictions, on a per capita basis, for each of the 2,250 jurisdictions in the state. The 56 jurisdictions that did not receive estate tax revenue during the time period of this study are categorized with those jurisdictions that received less than ten dollars per capita.

Table 2.1 - Distribution of Estate Tax per Capita for All Jurisdictions

	2000	2001	2002	2003	2004
\$10< Per capita *	1,339	1,327	1,555	1,686	1,647
\$10 - \$20 per capita	431	415	357	260	301
\$20 - \$30 per capita	204	223	120	111	119
\$30 - \$40 per capita	110	103	68	68	62
\$40 - \$50 per capita	59	50	51	28	28
\$50-\$100 per capita	58	80	64	64	61
\$100> per capita	49	52	35	33	32
Total Jurisdictions	2,250	2,250	2,250	2,250	2,250

* 56 jurisdictions that never received estate tax are included

Table 2.1 shows that 59.5% of jurisdictions received less than 10 dollars per capita in 2000, increasing to 73.2% of jurisdictions in 2004. Conversely, the number of jurisdictions receiving more than 10 dollars per capita decreases throughout the studied period. These

general trends mimic estate tax revenue trends, and are due to the same forces that cause estate tax revenue to fluctuate, namely the phase down of the tax, stock market volatility and weakness during the 2001 recession, and the unpredictable nature of estates finalized in a defined time period and location. Table 2.2 summarizes distributions to jurisdictions which received estate tax income for all five years within this study, and Table 2.3 summarizes distributions to jurisdictions which did not receive estate tax income in all five years.

Table 2.2 – Estate Tax per Capita for Jurisdictions with 5 Years of Estate Tax

	2000	2001	2002	2003	2004
\$10< Per capita	516	515	623	684	654
\$10 - \$20 per capita	283	268	258	208	236

\$30 - \$40 per capita	31	42	25	26	11
\$40 - \$50 per capita	24	16	10	4	5
\$50-\$100 per capita	18	25	14	10	16
\$100> per capita	11	15	14	8	7
Total Jurisdictions	1,126	1,126	1,126	1,126	1,126

Analysis of 43 High Impact Jurisdictions

To determine which of the 1,124 jurisdictions that received revenue in each of the five years seems to be most reliant on that revenue, we assigned each jurisdiction in that subset a score for each year based on the per capita receipts shown in the following figure:

Figure One
Scoring Allocation for Jurisdictions Receiving Revenue Each Year

Per Capita Revenue	Score
\$10< Per capita	1
\$10 - \$25 per capita	2
\$25 - \$50 per capita	3
\$50 - \$100 per capita	4
\$100> per capita	5

This scoring process was performed for each year. We then averaged all five years and sorted this subset of jurisdictions from the average highest score (5) to the lowest score (1). We narrowed our data set to 43 jurisdictions which we considered “high impact” for this study, based on a relatively high average score (scores above 3.5).

We compared estate tax revenue received by jurisdiction per capita, municipal income tax revenue per capita, general fund revenue per capita, and the ratio of estate tax revenue per capita to general fund revenue per capita for the 43 high impact jurisdictions for each year in the study. In an attempt to illustrate trends within the data set, we then compare each of the four values within each of the 43 high impact jurisdictions, for each year within the study.

Results

We narrowed our data set to 43 jurisdictions which we determined are heavily reliant on the estate tax. The 43 jurisdictions presented here contain 6% of the state’s population, but receive between 25 percent and 38 percent of estate tax revenue, depending on the year.

Table 3 summarizes estate tax revenue received and total general revenue fund dollars for the 43 jurisdictions. Data are presented by year. There is fluctuation in the amount of estate tax received, and estate tax per capita, from year to year. Total general fund revenue also fluctuates during this period. However, fluctuation within the sample period occurs over a greater range of values for estate tax figures than for general fund revenues within these high impact jurisdictions.

Table 3 – Summary of the 43 High Impact Jurisdictions

	2000	2001	2002	2003	2004
Total estate tax received (millions)	\$70.4	\$69.7	\$67.9	\$85.6*	\$65.4
Total population estimate in the 43 jurisdictions	735,287	718,754	710,791	703,936	697,141
Estate tax per capita	\$95.73	\$97.01	\$95.53	\$121.59	\$93.82
Ratio of the 43 jurisdictions estate tax to total estate tax	26.6%	26.0%	27.8%	38.4%	32.5%
General fund revenue (millions)	\$583.4	\$605.5	\$599.4	\$610.7	\$591.0
General fund revenue per capita	\$793.41	\$842.40	\$843.33	\$873.67 ¹	\$916.14 ¹
Estate tax per capita as a percentage of general fund revenue per capita ²	12.1 %	11.5 %	11.3 %	14.0 %	11.0%

* Shaker Heights and Indian Hills grew by a combined \$18.9 million from 2002 to 2003.

¹ Excludes jurisdictions for which general revenue fund data are not yet available.

² The state auditor reports do not show what percentage of estate tax revenues actually go into the general revenue funds of the jurisdictions. The results shown here assume that all estate tax revenue goes to the general funds.

Table Three shows some clear trends over the five-year period. With the exception of the aberration in 2003, there is clearly a slow declining trend in both the estate tax per capita and the ratio of the estate tax to total general fund revenue. It is also clear that the portion of the overall estate tax going to the high impact jurisdictions relative to all jurisdictions has grown over time, going from just over a quarter in 2000 to nearly a third in 2004. All of these trends are likely due to the phase down of the estate tax over the last few years. This phase down

has caused lower value estates to become exempt from tax, concentrating the taxable estates in the more wealthy areas.

Table 4 shows estate tax collections per capita for each of the 43 high impact jurisdictions from 2000 – 2004. The amount of year-to-year variability is clear in the table.

Table 4 – Estate Tax Per Capita of the 43 High Impact Jurisdictions

Tables 4.1 through 4.5 in the Appendix show more detail for these 43 jurisdictions for each of the five years.

Conclusions

- Total estate tax received by jurisdictions fluctuated, with a general trend of decreasing revenue during the time period tested.
- Of jurisdictions receiving estate tax revenue every year, the percent receiving less than \$10 per capita increased from 46 percent in 2000 to 58 percent in 2004.
- While the estate tax is becoming a gradually smaller share of general revenue funds overall, in a number of the 43 high impact jurisdictions it is still a significant source of revenue on an annual basis.
- Over time, the bulk of estate tax revenues are becoming more concentrated in fewer jurisdictions.
